UNITED STATES DEPARTMENT OF AGRICULTURE

OFFICE OF THE SECRETARY—Circular No. 100

COMMERCIAL STOCKS OF WHEAT AND FLOUR

IN THE UNITED STATES
ON AUGUST 31, 1917

Contribution from the Bureau of Markets
CHARLES J. BRAND, Chief

WASHINGTON, FEBRUARY 28, 1918

TOTAL commercial stocks of wheat in the United States on August 31, 1917, the date of the preliminary War Emergency Food Survey, were approximately 75,000,000 bushels, representing less than a two-months' supply. Of the stocks reported, more than four-fifths was held by elevators, mills, and wholesale grain dealers.

The West North Central division of states, reported about one-third of the stocks of the entire country, while the East North Central and the Pacific divisions each reported about one-fifth of the total.

About five-sixths of the reports, based on quantity reported, gave data not only for August 31, 1917, but also for the corresponding date of 1916. From these two-year reports it appears that the stocks of August 31, 1917, were only 36.9 per cent of the stocks on hand August 31, 1916.

Total commercial stocks of flour in the United States on August 31, 1917, based on estimates from the survey, were about 12,000,000 pounds. This represents approximately a six-weeks' supply.

The largest stocks of flour were reported by the group of flour mills, elevators and wholesale grain dealers, which held a total of 3,633,653 barrels. Retail dealers held 2,456,826 barrels, and bakers 1,999,583 barrels. Five states held one-third of the total stocks of flour. These in order of their holdings were: New York, Pennsylvania, Illinois, Nebraska, and California.

The stocks reported for August 31, 1917, were 75.7 per cent of those for August 31, 1916. The decrease in holdings was general among all groups and classes of concerns.

Detailed information concerning the stocks of wheat and flour in commercial channels on August 31, 1917, is presented in the following pages.

COMMERCIAL STOCKS OF WHEAT AND FLOUR IN THE UNITED STATES ON AUGUST 31, 1917.

COMMERCIAL STOCKS OF WHEAT.

INFORMATION regarding the stocks of wheat in commercial channels in the United States was obtained through the War Emergency Food Survey of August 31, 1917. The total amount of wheat reported as on hand on the date of the survey was 66,253,907 bushels. The reported stocks are believed to represent from 85 to 90 per cent of the total quantity in the hands of all business concerns, from which it may be concluded that the total commercial stocks were approximately 75,000,000 bushels on the date of the survey. On that date the 1916 stocks had been largely disposed of or turned into flour, and a relatively small part of the 1917 crop had entered commercial channels.

On the basis of the rate of consumption of wheat in the United States during the year ending June 30, 1917, which was 10 per cent lower than the normal or average consumption of previous years and which amounted roughly to 41,000,000 bushels per month, the stocks of wheat on August 31, 1917, represented less than a two months' supply. This does not include the wheat converted into flour, the stocks of which are considered separately in this circular; neither does it include the stocks of wheat remaining on the farms, for which no satisfactory estimate is available.

Of the total 1917 stocks reported by the several groups and classes of dealers, as shown in Table 1, the grain elevators, mills, and wholesale dealers held nearly 59,000,000 bushels, or about 88 per cent. The distribution of stocks among the various groups of firms reporting is graphically represented in Diagram 1.

Note.—The material in this circular was prepared under the direction of Mr. C. W. Thompson by the War Emergency Food Survey Section of the Bureau of Markets.

DIAGRAM 1.—Distribution of Total Stocks of Wheat Reported for August 31, 1917.

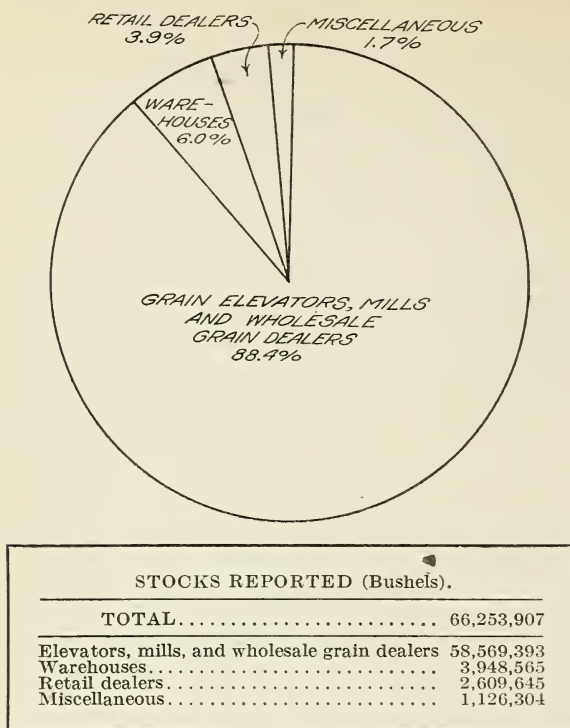

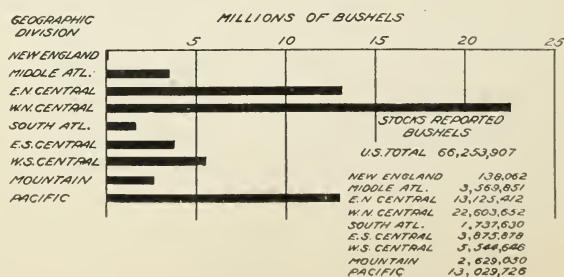

Table 2 shows the number of schedules received from the groups and classes of dealers handling wheat, and also the number of such schedules reporting wheat on hand on the date of this survey.

GEOGRAPHIC DISTRIBUTION OF TOTAL STOCKS.

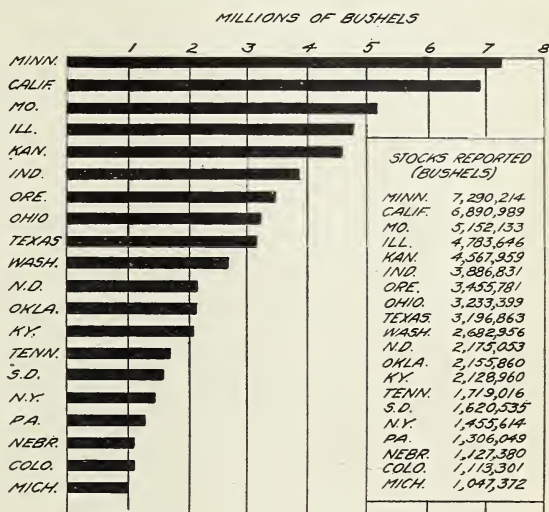

The total 1917 stocks reported by the important groups of firms are shown in Table 3 by geographic divisions and by states. The stocks reported for each geographic division are shown graphically in Diagram 2.

DIAGRAM 2.—Total Stocks of Wheat Reported for August 31, 1917—
GEOGRAPHIC DISTRIBUTION.

The stocks of wheat reported for the West North Central division, amounting to over 22,000,000 bushels, represent about one-third of the United States total. The East North Central and Pacific divisions, each of which reported over 13,000,000 bushels, rank next in importance.

The data presented for individual states indicate that the West North Central division held its high rank largely by virtue of the holdings of Minnesota, Missouri, and Kansas, these three states together reporting over 17,000,000 bushels, or about 75 per cent of the total for the geographic division and more than 25 per cent of the total for the entire country. From Diagram 3, which shows graphically the stocks reported for the 20

DIAGRAM 3.—TOTAL STOCKS OF WHEAT REPORTED FOR THE 20 MOST IMPORTANT STATES.

states reporting the largest wheat stocks, it will be seen that Minnesota and California lead, these states showing holdings of 7,290,000 bushels and 6,891,000 bushels, respectively. Missouri, Illinois, and Kansas follow, with approximately 5,000,000 bushels each. The combined holdings of the five states just mentioned amounted to 28,000,000 bushels, or more than 43 per cent of the United States total.

HOLDINGS OF ELEVATORS, MILLS, AND WHOLESALE GRAIN DEALERS.

Attention already has been called to the fact that the group designated elevators, mills, and wholesale grain dealers comprises the important holders of wheat, this group reporting a total of nearly 59,000,000 bushels or 88 per cent of the total for the United States. (See Diagram 1.) A comparison of the first two columns of Table 3 indicates that the stocks held by this group constitute a very large part of the stocks reported for most of the individual states, as well as of the United States total. To

cite a few instances, 99.4 per cent of Minnesota wheat stocks, 94.2 per cent of Missouri stocks, and 94.8 per cent of Texas stocks were reported by elevators, mills, and wholesale grain dealers.

STOCKS HELD BY WAREHOUSES AND RETAIL DEALERS.

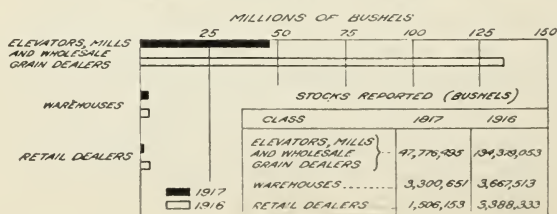

As may be further seen from Table 3, the stocks of wheat in warehouses, amounting to a little less than 4,000,000 bushels, were located almost exclusively in the Pacific States. This situation is doubtless explained by the fact that in this region wheat is still handled mainly in sacks instead of in bulk, as is the prevailing practice elsewhere in the United States.

The 1917 stocks held by retail dealers are given by geographic divisions and by states in Table 4. Analysis of these data shows that of the group total, amounting to 2,609,645 bushels, or 3.9 per cent of the United States total, the retail grain and flour dealers reported 1,654,800 bushels, or 63.4 per cent. The general stores held only 27.5 per cent of the group total and the retail grocers only 9.1 per cent. In the geographic distribution of the total retail stocks the East North Central division leads, with the West North Central and the Pacific divisions next. It may be noted in this connection that the two geographic divisions which rank lowest in total wheat stocks—the New England and the South Atlantic—have relatively large amounts of wheat in the hands of retail dealers.

COMPARATIVE FIGURES FOR 1917 AND 1916.

The comparative figures for August 31, 1917, and August 31, 1916, given in Table 5 and based on the reports from those firms that gave data for the two years, show a heavy decline in the total holdings of wheat reported by each of the several groups of firms, as well as in the United States totals. Comparing the totals for the two years, it appears that the 1917 total is less than 37 per cent of the 1916 total. On the basis of an estimated total of 75,000,000 bushels for August 31, 1917, the corresponding figure for a year earlier would be approximately 203,000,000 bushels. The elevators, mills, and wholesale grain dealers, the most important group, show 1917 holdings amounting to only 35.6 per cent of those of 1916, the warehouses show 90.0 per cent, the wholesale grocers 49.7 per cent, and the retail dealers 44.5 per cent. These facts are graphically presented in Diagram 4, which shows a significantly large relative

DIAGRAM 4.—STOCKS OF WHEAT REPORTED FOR AUGUST 31, 1917, AND AUGUST 31, 1916, BY IMPORTANT GROUPS OF FIRMS.

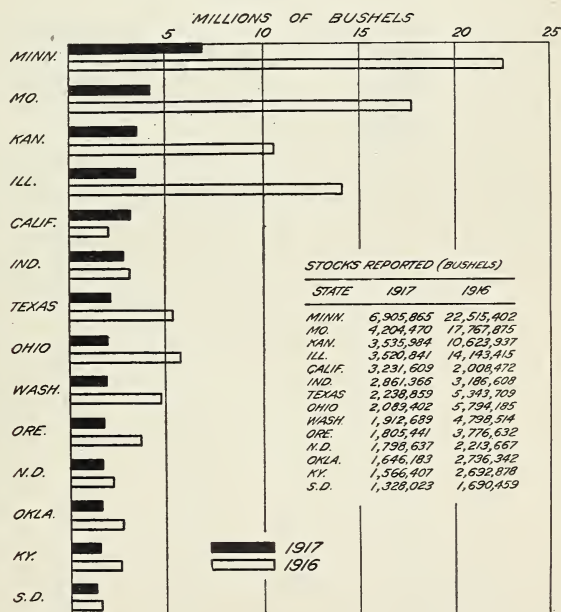

drop in elevator holdings in 1917, with warehouse holdings practically equal for the two years.

When the data for geographic divisions are considered, the same heavy decline appears throughout the country. The holdings of the West North Central division, comprising the leading wheat states, dropped in 1917 to 30 per cent of the 1916 stocks. The reports from other divisions indicate 1917 holdings of from 20 per cent on the one extreme to 72 per cent on the other, of the 1916 stocks.

The almost uniform heavy reduction in the stocks of the elevators, mills, and the wholesale grain dealers in the 14 states reporting largest stocks of wheat is graphically presented in Diagram 5. California, it may be noted, is the only state to show an increase in 1917 stocks as compared with those of 1916.

DIAGRAM 5.—STOCKS OF WHEAT REPORTED FOR AUGUST 31, 1917, AND AUGUST 31, 1916, BY GRAIN ELEVATORS, MILLS, AND WHOLESALE GRAIN DEALERS, FOR THE 14 MOST IMPORTANT STATES.

COMMERCIAL STOCKS OF FLOUR.¹

Reports for the War Emergency Food Survey of August 31, 1917, show stocks of flour on this date of 10,092,980 barrels. It is estimated that this figure represents 80 to 90 per cent of the total commercial holdings of flour and that therefore total stocks on this date were approximately 12,000,000 barrels. On the basis of an annual consumption of one barrel per capita, this quantity represents about a six weeks' supply in trade channels. Of the total holdings reported, as may be seen from Table 6, flour mills, elevators, and wholesale grain dealers held 3,633,653 barrels, or 36.8 per cent; retail dealers held 2,456,826 or 24.9 per cent; bakers, 1,999,583 or 20.3 per cent; wholesale grocers, 958,628 or 9.7 per cent;

DIAGRAM 6.—DISTRIBUTION OF TOTAL STOCKS OF FLOUR REPORTED FOR AUGUST 31, 1917.

storage warehouses, 514,926 or 5.2 per cent; and a miscellaneous group of concerns, 306,361 or 3.1 per cent. The relative holdings of these groups of concerns are represented graphically in Diagram 6.

The number of schedules received from concerns belonging to those groups of business firms that usually handle flour was 133,809. Of these

¹ The term flour as used in this circular means wheat flour, including patents and straights, first and second clear, low grades, and whole-wheat and graham flour.

concerns, as shown in Table 7, 92,974 reported stocks on hand at the date of the survey. Out of 15,686 flour mills, elevators, and wholesale grain dealers, 7,711 or 49 per cent reported stocks of flour on hand. Among the other groups of concerns reporting, those holding stocks of flour included 38.9 per cent of the storage warehouses, 62.0 per cent of the wholesale grocers, 95.4 per cent of the bakers, 77.7 per cent of the retail dealers, and 28.3 per cent of a miscellaneous group of concerns.

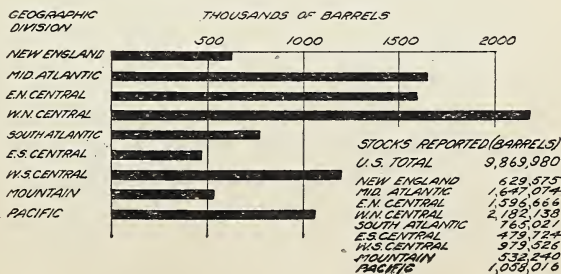

GEOGRAPHIC DISTRIBUTION OF TOTAL STOCKS.

The West North Central group of states reported 2,182,138 barrels of flour on hand or about 20 per cent of total stocks for the whole country. Of this total, 1,593,497 barrels were held by three states in the group of seven, Nebraska reporting 634,915 barrels, Minnesota, 489,438 barrels and Missouri, 469,144 barrels. Kansas and Iowa each reported holdings of more than 200,000 barrels. The holdings by geographic divisions as well as by states is shown in Table 8.

The Middle Atlantic division ranks second in stocks reported, with 1,647,074 barrels, about half of which were reported from New York and two-fifths from Pennsylvania. Holdings by bakers were the largest among the different groups of concerns in these two states. Stocks in New Jersey were 174,740 barrels or about one-ninth of the total stocks for this group of states.

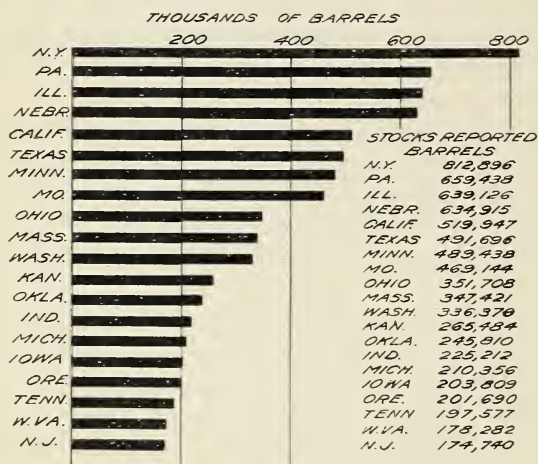

The East North Central division of states, with 1,596,666 barrels ranked third. The bakers reported the largest amount of holdings in the division, namely, 572,421 barrels; mills, elevators, and wholesale dealers coming second with 449,426 barrels. The Pacific States were in fourth place, with 1,058,016 barrels. Each of the other geographic divisions reported holdings ranging from about half a million barrels to a million. The total reported stocks of flour, by geographic divisions, is shown in graphic form in Diagram 7.

DIAGRAM 7.—TOTAL STOCKS OF FLOUR REPORTED FOR AUGUST 31, 1917—GEOGRAPHIC DISTRIBUTION.

Eight states reported nearly one-half of the total stocks of the country, New York leading with 812,896 barrels, followed by Pennsylvania, 659,438; Illinois, 639,126; and Nebraska, 634,915; while California, Texas, Minnesota, and Missouri each reported approximately one-half million barrels. It thus appears that stocks of flour were held to a great extent in states with large populations or where the larger mills and elevators are located. Diagram 8 illustrates graphically the total stocks of flour reported for the 20 most important states.

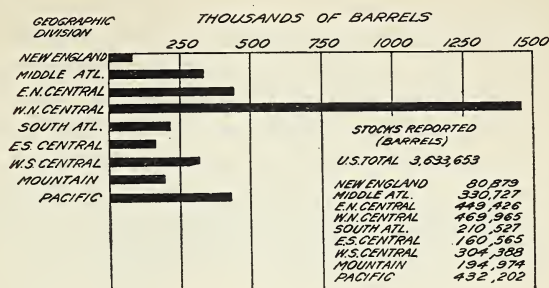

DIAGRAM 8.—TOTAL STOCKS OF FLOUR REPORTED FOR THE 20 MOST IMPORTANT STATES.

HOLDINGS OF MILLS, ELEVATORS, AND WHOLESALE GRAIN DEALERS.

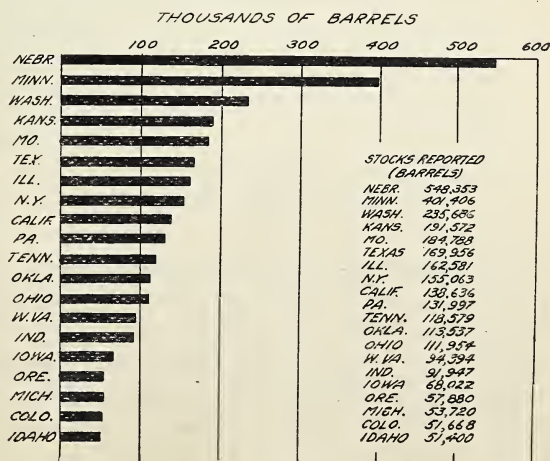

The stocks of flour reported by mills, elevators, and wholesale grain dealers were almost all held by the flour manufacturing or milling concerns, the holdings reported by this class of concerns being centered in the West North Central division of states. Hence this division again leads, with about 38.1 per cent of the total stocks of flour for the entire country held by mills, elevators, and wholesale dealers. Nebraska, Minnesota, Kansas, and Missouri contribute conspicuously to the total stocks reported by this division. The West South Central division ranks second, Texas alone holding more than one-half of the stocks reported. A graphic presentation of these holdings, by geographic divisions, may be seen in Diagram 9.

DIAGRAM 9.—STOCKS OF FLOUR REPORTED BY FLOUR MILLS, ELEVATORS, AND WHOLESALE GRAIN DEALERS—GEOGRAPHIC DISTRIBUTION.

Holdings by mills, elevators, and wholesale grain dealers in individual states show Nebraska as the only state reporting more than 500,000 barrels. Minnesota reported 401,406 and Washington 235,686 barrels. None of the other 20 important states, the holdings of which are shown graphically in Diagram 10, reported more than 200,000 barrels for this group of concerns.

DIAGRAM 10.—STOCKS OF FLOUR REPORTED BY FLOUR MILLS, ELEVATORS, AND WHOLESALE GRAIN DEALERS FOR THE 20 MOST IMPORTANT STATES.

STOCKS HELD BY STORAGE WAREHOUSES.

Of the 514,929 barrels reported by storage warehouses, the cold storage plants held less than 5 per cent, the general warehouses holding more than 95 per cent of the total. Nearly one-half of the warehouse stocks were located in the three states of New York, California, and Pennsylvania, these states reporting 98,650, 92,780, and 63,490 barrels, respectively. Maryland ranked fourth in warehouse stocks, with 36,572 barrels, and Massachusetts fifth, with 32,490 barrels. Missouri, Illinois, and Ohio reported, roughly, 30,000, 27,000, and 25,000 barrels, respectively. In no other states did the warehouse stocks reach 10,000 barrels.

STOCKS HELD BY WHOLESALE GROCERS.

Stocks held by wholesale grocers were the largest in the South Atlantic division, which reported 220,121 barrels, one-third of these holdings being reported from Georgia. The Middle Atlantic division reported 140,079 barrels; the West South Central, 126,061; the East South Central, 118,218; and the Pacific, 100,909 barrels. Each of the other divisions held less than 100,000 barrels.

More than half of the 958,628 barrels reported by wholesale grocers were held in 10 states, Oregon coming first with 82,143 barrels, followed by New York with 78,633; Georgia, 72,183; Pennsylvania, 48,988; Louisiana, 47,653; Arkansas, 46,725; Illinois, 45,294; Mississippi, 42,237; Massachusetts, 42,225; and Alabama, with 39,767 barrels.

STOCKS HELD BY BAKERS.

Bakers' stocks were especially large in the Middle Atlantic and the East North Central divisions of states, the stocks of each amounting to approximately 575,000 barrels.

Among individual states, New York, Illinois, and Pennsylvania each held bakers' stocks in excess of 200,000 barrels, while these holdings added to those of California, Ohio, and Massachusetts, each with over 100,000 barrels, constitute more than half of the total bakers' stocks for the entire

country. Diagrams 11 and 12 present in graphic form the holdings of bakers, by geographic divisions and for the 20 leading states, respectively.

DIAGRAM 11.—STOCKS OF FLOUR REPORTED BY BAKERS—GEOGRAPHIC DISTRIBUTION.

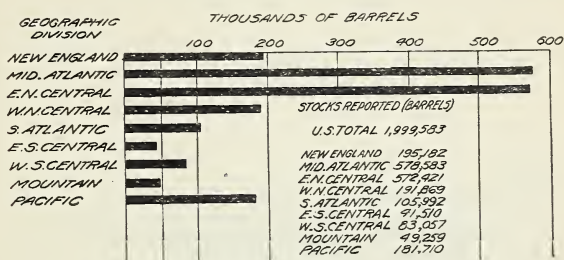

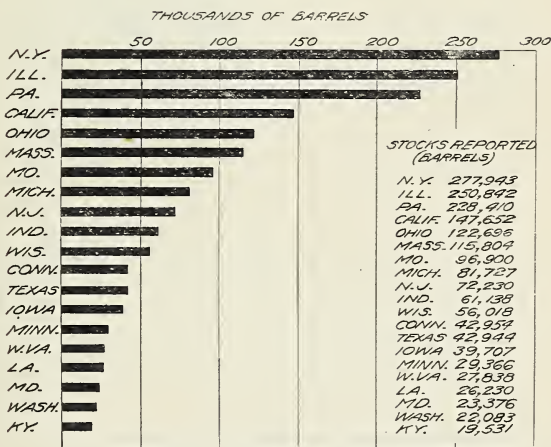

DIAGRAM 12.—STOCKS OF FLOUR REPORTED BY BAKERS, FOR THE 20 MOST IMPORTANT STATES.

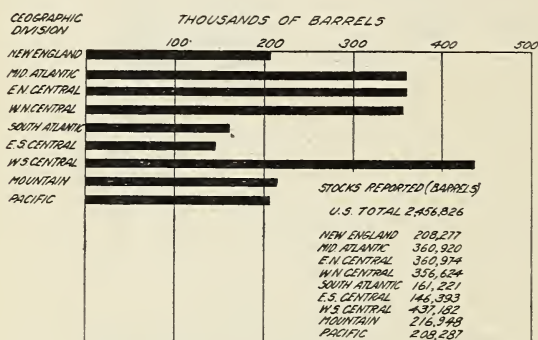

STOCKS HELD BY RETAIL DEALERS.

Retail dealers in the West South Central division of states held 437,182 barrels of flour, or 13.7 per cent of all retail stocks. The holdings of retailers reported for the East North Central, Middle Atlantic, and West North Central divisions each amounted to more than 350,000 barrels. Table 9 gives retail stocks reported by the different classes of retail dealers, for the

geographic divisions, as well as for individual states. The distribution of these stocks by geographic divisions is also shown in graphic form in Diagram 13.

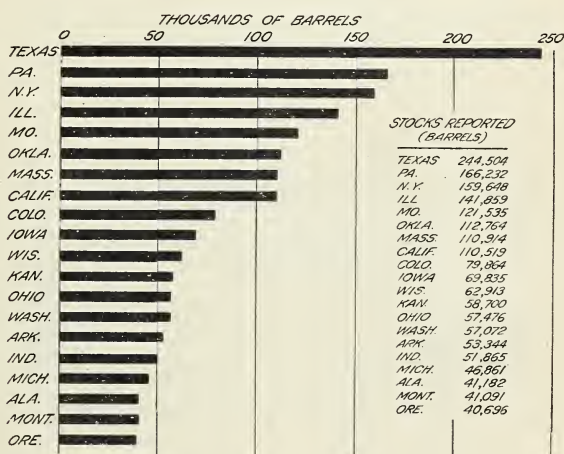

DIAGRAM 13.—STOCKS OF FLOUR REPORTED BY RETAIL DEALERS—GEOGRAPHIC DISTRIBUTION.

The retail dealers in Texas, as the table shows, held the largest stocks reported for any state, namely, 244,504 barrels. Of this amount, the retail grocers held 110,826 barrels and general stores, 100,372 barrels. The retail stocks of Pennsylvania were the second largest, amounting to 166,232 barrels, the bulk of which was distributed fairly evenly among retail grocers, general stores, and retail grain and flour dealers. Other states with over 100,000 barrels in retail stocks were New York, Illinois, Missouri, Oklahoma, Massachusetts, and California. Stocks of flour reported by retail dealers for the 20 most important states are shown graphically in Diagram 14.

In general, retail grocers reported larger total stocks than the general stores, except in the Southern and Mountain states, where general stores held the largest stocks among retail dealers. Only in the New England and the Middle Atlantic states do retail grain and flour dealers rank first in holdings among the different classes of retailers. Diagram 15 presents graphically the distribution of total retail stocks among the different classes of retailers.

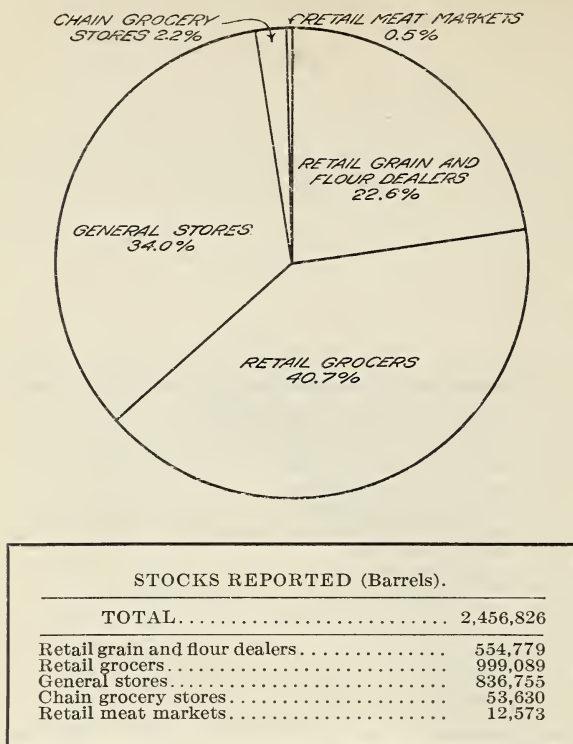

DIAGRAM 14.—STOCKS OF FLOUR REPORTED BY RETAIL DEALERS FOR THE 20 MOST IMPORTANT STATES.

COMPARATIVE HOLDINGS FOR 1917 AND 1916.

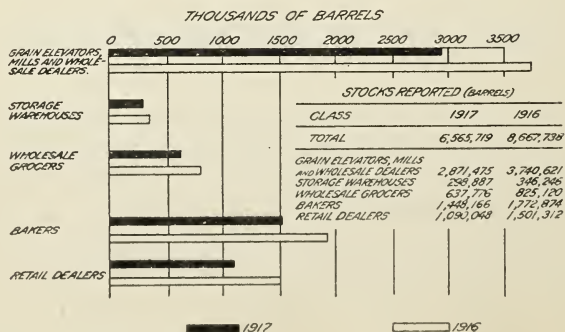

Among concerns furnishing data for both August 31, 1917, and August 31, 1916, a decrease in the total holdings of 24.3 per cent was indicated for 1917. These comparative holdings are shown by geographic divisions and by states, for each of the groups of concerns reporting flour, in Table 10. The decrease in holdings was general in all groups and classes of concerns, the greatest relative decreases being found in the retail and miscellaneous groups and the smallest relative decrease in the storage warehouse group. Comparative stocks for the two dates are represented graphically, by

DIAGRAM 15.—DISTRIBUTION OF STOCKS OF FLOUR REPORTED BY RETAIL DEALERS.

groups of concerns, in Diagram 16. The actual percentages of decrease for the different groups of firms were as follows: Flour mills, elevators, and wholesale grain dealers, 23.2 per cent; storage warehouses, 13.7 per

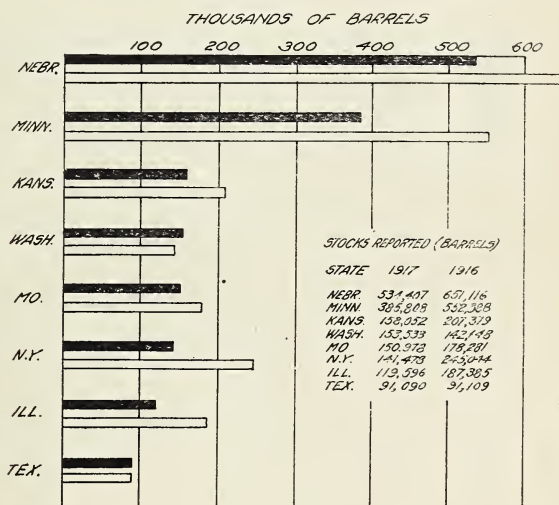

DIAGRAM 16.—STOCKS OF FLOUR REPORTED FOR AUGUST 31, 1917, AND AUGUST 31, 1916, BY IMPORTANT GROUPS OF FIRMS.

cent; wholesale grocers, 22.7 per cent; bakers, 18.3 per cent; retailers, 27.4 per cent; and miscellaneous, 54.4 per cent.

While the combined stocks for all groups of concerns showed decreases for all geographic divisions, the flour mills, elevators, and wholesale grain dealers reported a slight increase in holdings for the South Atlantic, the West South Central, and the Mountain states. The holdings of this group in all other divisions, showed decreases. The comparative holdings of the mills, elevators, and wholesale grain dealers are shown graphically for eight most important states in Diagram 17.

DIAGRAM 17.—STOCKS OF FLOUR REPORTED FOR AUGUST 31, 1917, AND AUGUST 31, 1916, BY GRAIN ELEVATORS, MILLS, AND WHOLESALE DEALERS, FOR THE EIGHT MOST IMPORTANT STATES.

Storage warehouses reported increased stocks in the Middle Atlantic division of states, most of which increase was reported for the state of New York. The West South Central division and the Mountain states also reported more flour in storage warehouses in 1917 than in 1916. In all other divisions, the stocks for this group showed a decrease.

The wholesale grocers and the bakers both reported a decrease in stocks for all geographic divisions, with the exception of the Mountain states, while the retail dealers as a group reported decreased stocks for each of the different geographic divisions.
